

Connecting Jasmine Smart to Amazon Alexa

This guide will walk you through the process of linking your Jasmine Smart devices (such as hybrid smart switches, door locks, and cameras) to Amazon Alexa. By connecting these services, you will be able to control your home ecosystem using simple voice commands.

Prerequisites

Before you begin, please ensure you have the following ready:

- A stable Wi-Fi internet connection.
- Your smart devices already set up, powered on, and working correctly within the **Jasmine Smart** app.
- An active **Jasmine Smart** account (the email/phone number and password you used to register).
- The **Amazon Alexa** app installed on your smartphone or tablet and logged into your Amazon account.
- An Alexa-enabled device (like an Amazon Echo speaker) already set up and connected to the same Wi-Fi network (optional, but recommended for voice control).

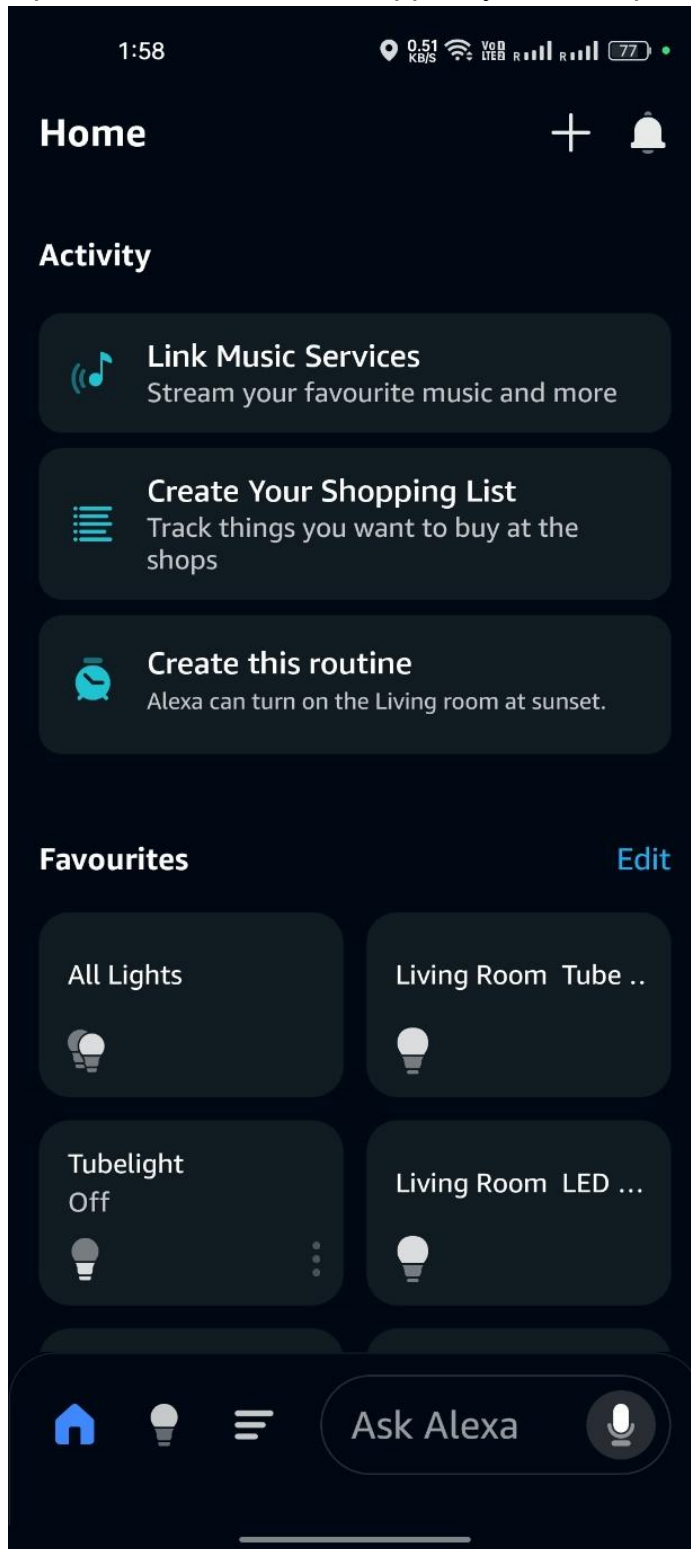

Step-by-Step Setup Guide

Step 1: Prepare Your Jasmine Smart App

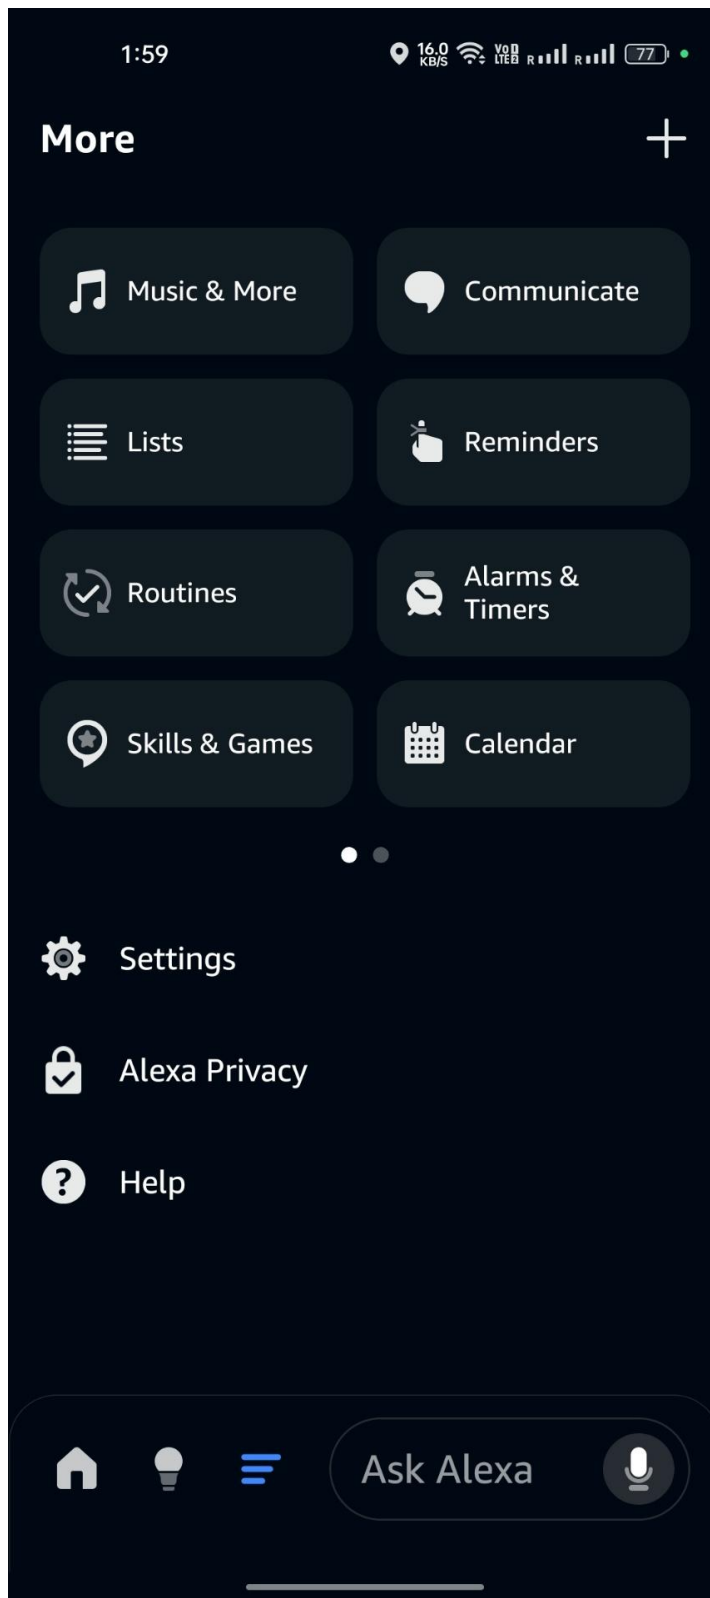

1. Open the **Jasmine Smart** app on your smartphone.
2. Check that all the devices you want to control with Alexa are listed on your home screen and are currently online.
3. **Tip:** Make sure to give your devices easy-to-remember names (e.g., "Living Room Light," "Bedroom Fan"). Alexa will use these exact names when you issue voice commands.

Step 2: Enable the Jasmine Smart Skill in Alexa

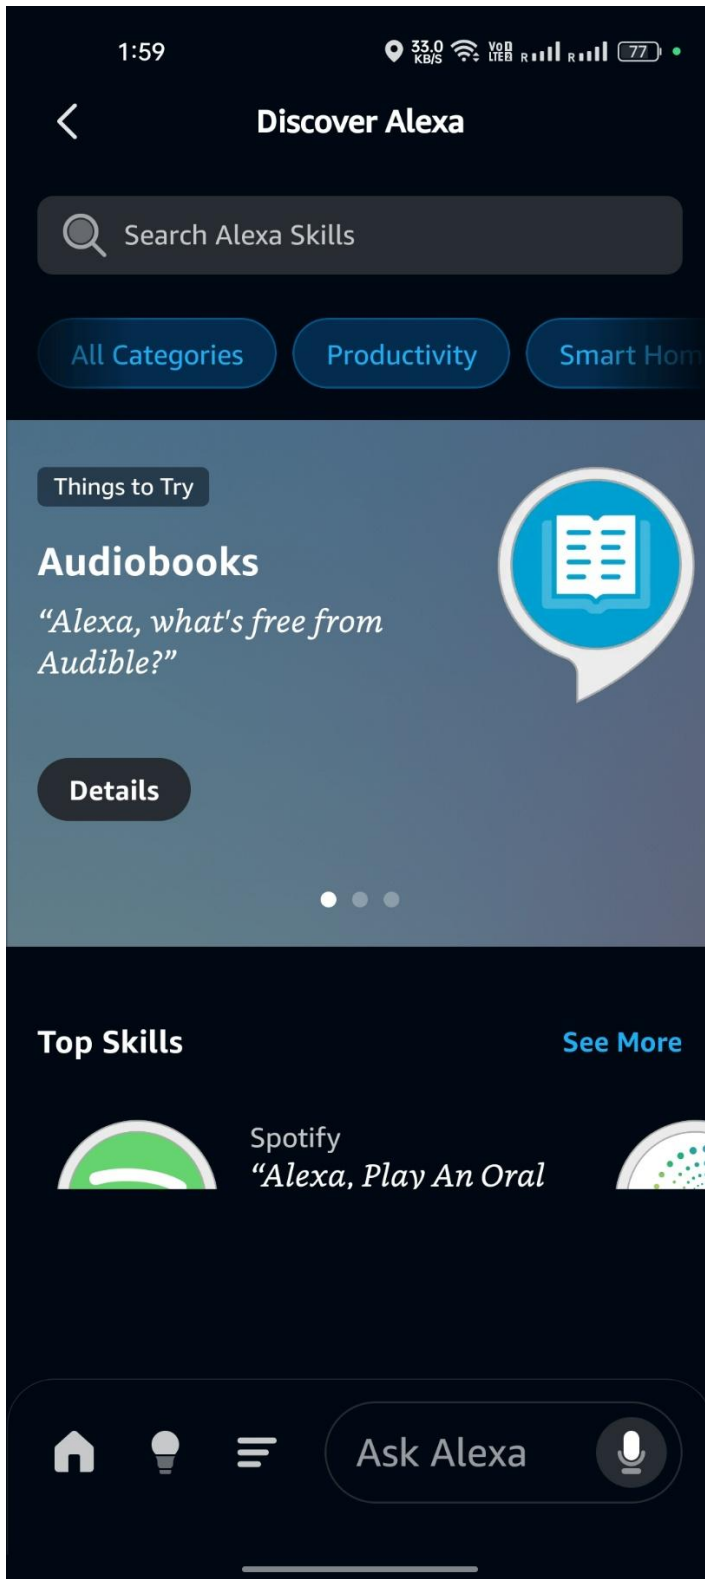

1. Open the **Amazon Alexa** app on your smartphone.

2. Tap on the **More** icon (three horizontal lines) in the bottom right corner of the screen.

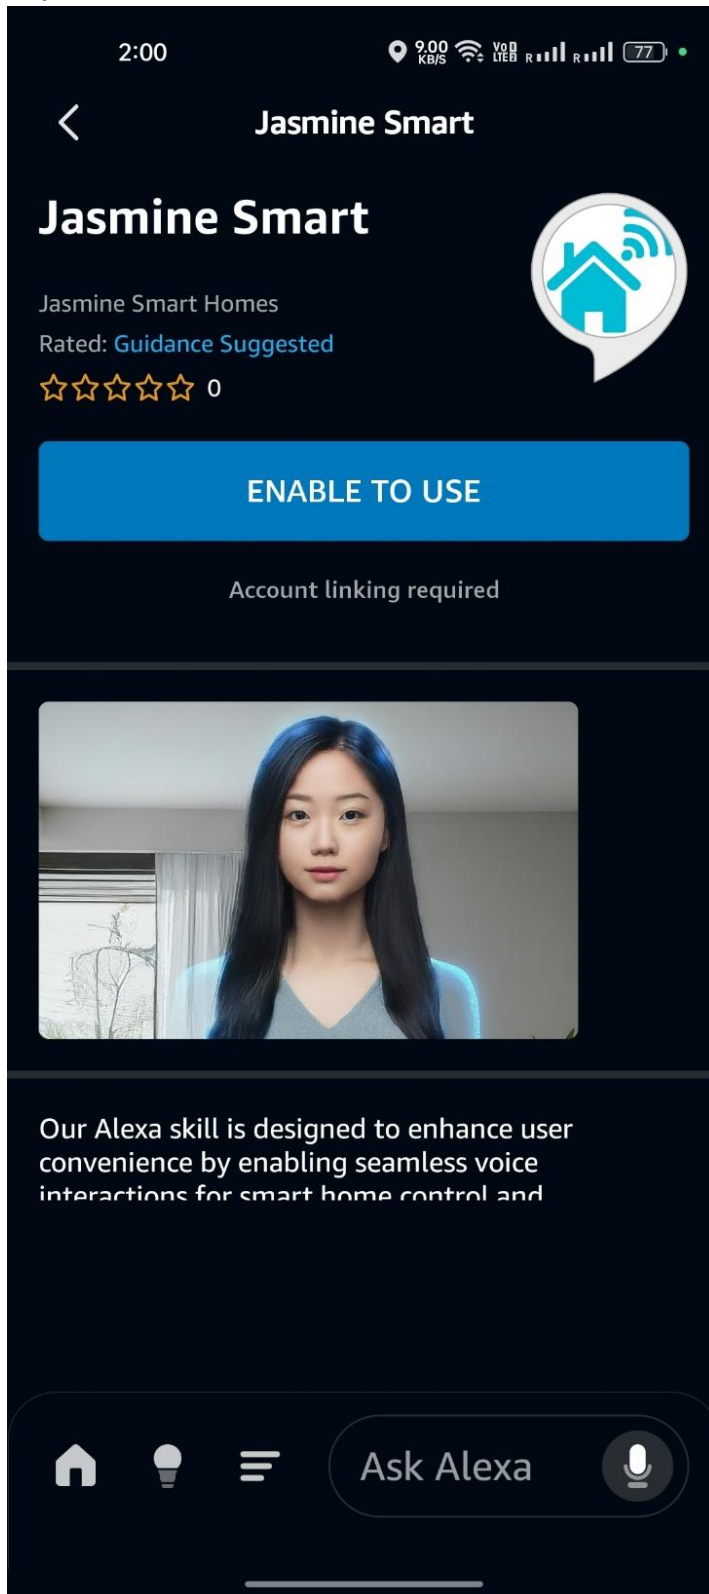

3. Select **Skills & Games** from the menu.

4. Tap the **Search** icon (magnifying glass) in the top right corner.
5. Type "**Jasmine Smart**" into the search bar and hit search.

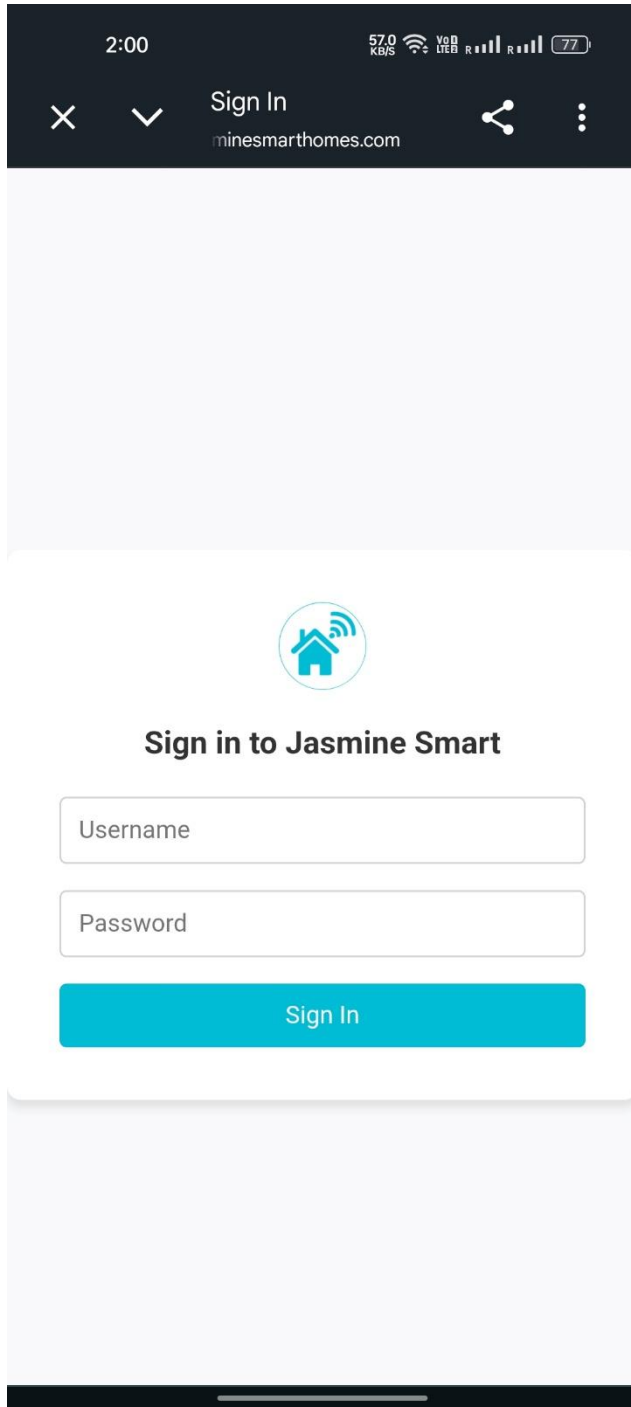

6. Locate the **Jasmine Smart** skill in the search results and tap on it.
7. Tap the **Enable to Use** button.

8. Step 3: Link Your Accounts

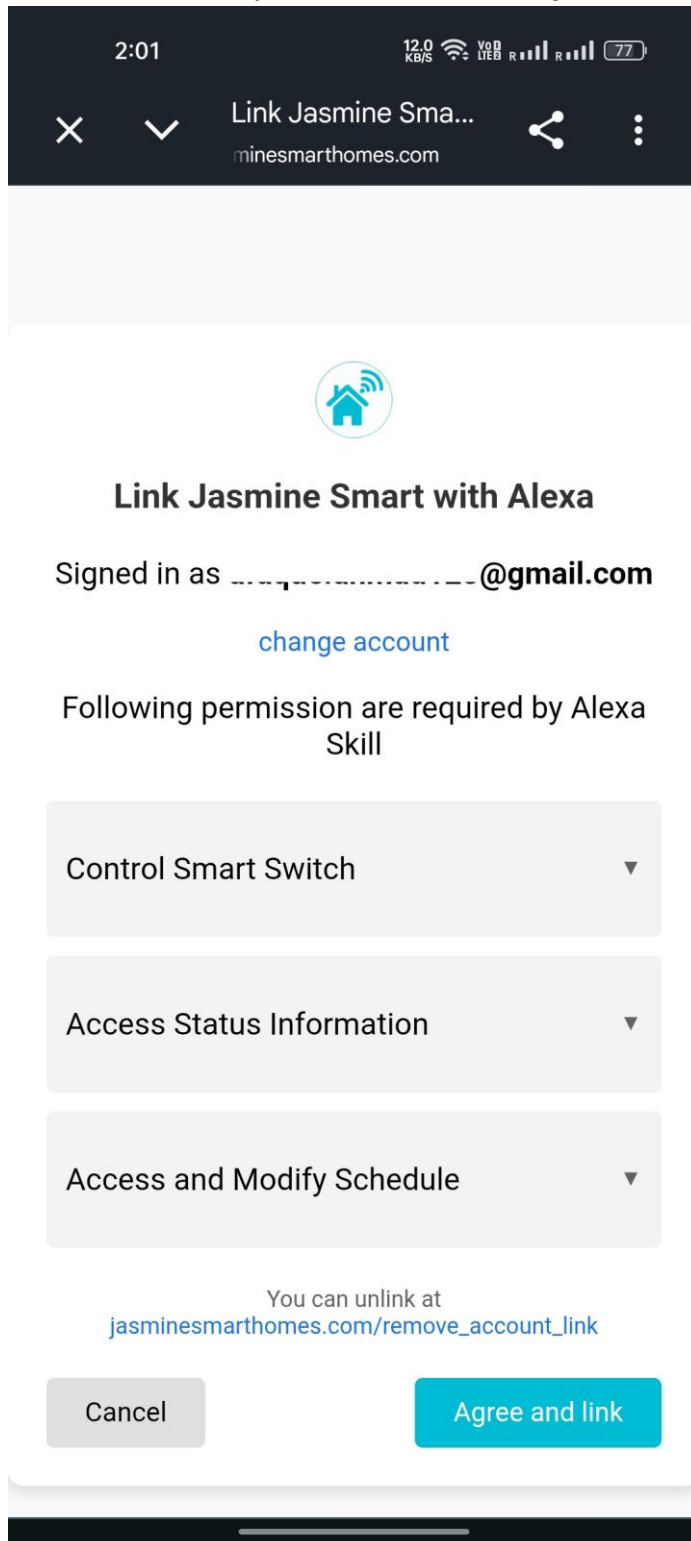

1. After tapping "Enable to Use," you will be redirected to the Jasmine Smart login page.
2. Enter the **email address or phone number** and **password** associated with your Jasmine Smart account.

The screenshot shows a mobile application interface for signing in. At the top, a dark header bar contains a close button (X), a dropdown arrow (V), the text "Sign In" and "minesmarthomes.com", a share icon, and a menu icon (three dots). Below the header is a large white rectangular area. In the center of this area is a circular icon with a blue house and a Wi-Fi signal. Below the icon, the text "Sign in to Jasmine Smart" is displayed. Underneath this text are two input fields: the first is labeled "Username" and the second is labeled "Password". Below the input fields is a blue button with the text "Sign In". At the bottom of the screen is a black bar with a white horizontal line in the center.

3. Tap **Link Now** or **Sign In**.

4. You may be asked to grant Amazon Alexa permission to access your Jasmine Smart devices. Tap **Authorize** or **Accept**.

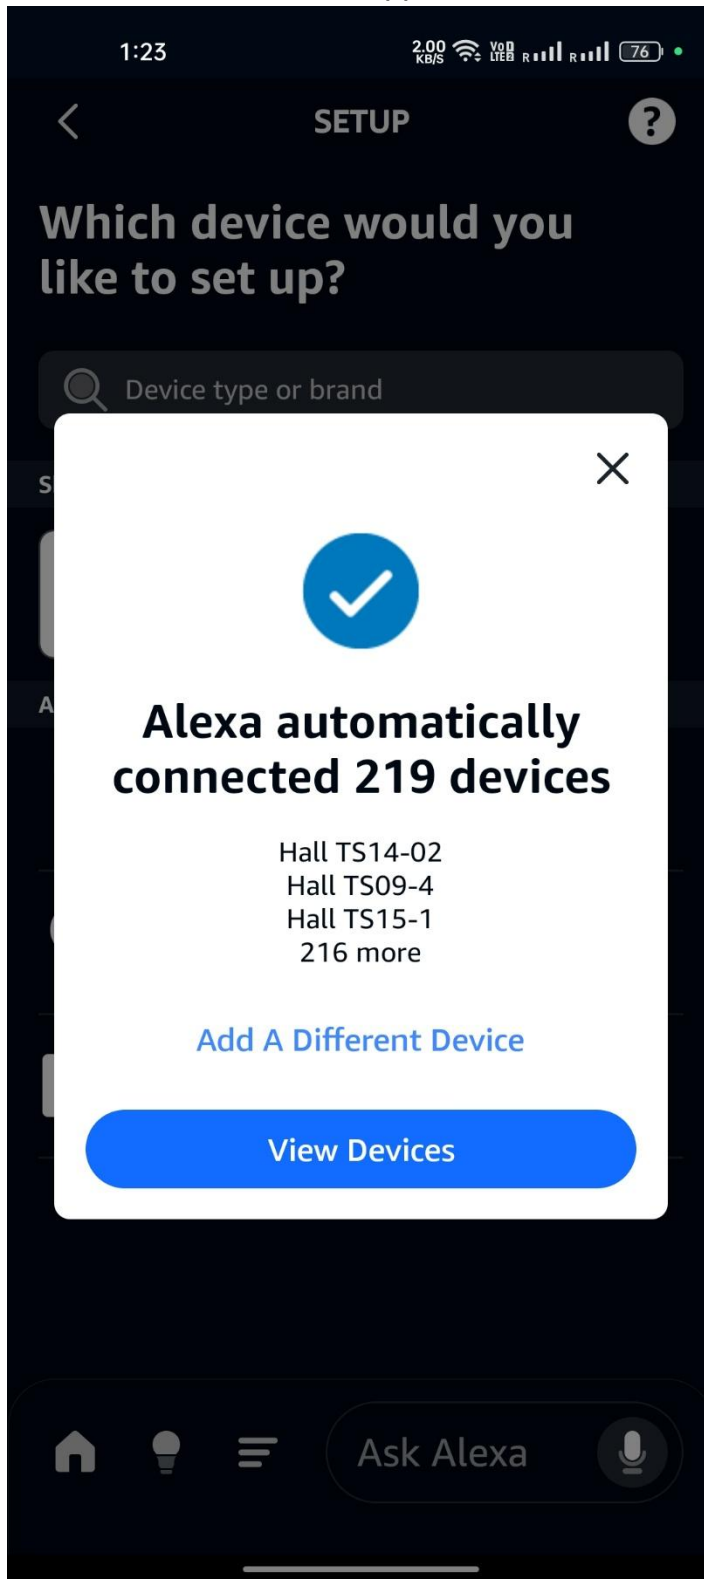

5. A confirmation screen will appear saying, "*Jasmine Smart has been successfully linked.*"
6. Tap **Close** (or the "X" in the top corner) to return to the Alexa app.

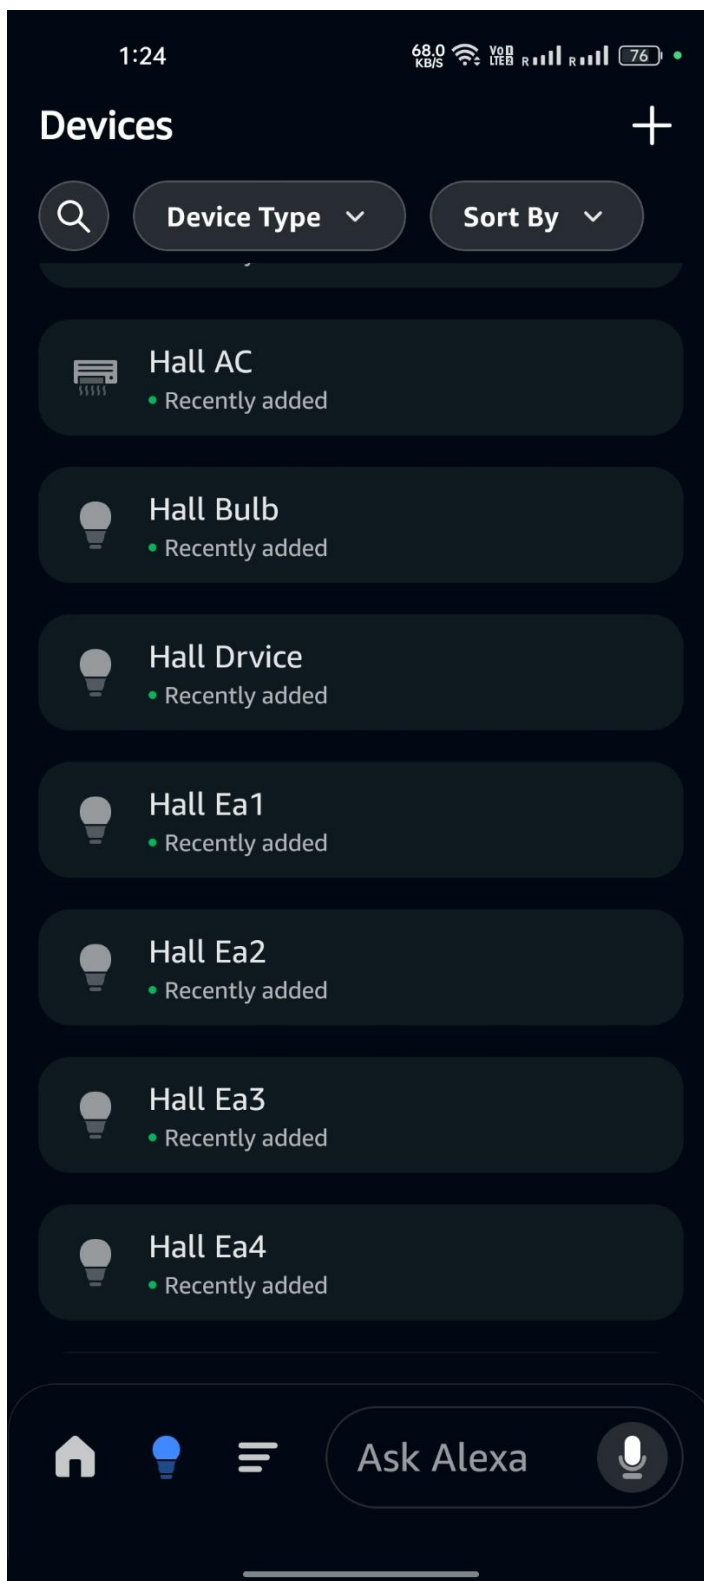

Step 4: Discover Your Smart Devices

1. Once you close the success page, the Alexa app will automatically prompt you to discover devices.
2. Tap the **Discover Devices** button.
3. Wait for about 45 seconds while Alexa scans your network and links to your Jasmine Smart ecosystem.

4. Once completed, your smart switches, locks, and cameras will appear in the **Devices** tab of the Alexa app.

5. You can now assign these devices to specific "Rooms" within the Alexa app for better organization (optional).

Supported Voice Commands

Now that your accounts are linked, you can control your Jasmine Smart devices hands-free! Try using these voice commands:

- **To turn on/off a switch or light:**
 - *"Alexa, turn on the Living Room Light."*
 - *"Alexa, turn off the Bedroom Fan."*
- **To check device status:**
 - *"Alexa, is the Front Door locked?"*
- **To sync new devices:**
 - *"Alexa, discover my devices."* (Use this if you add a new Jasmine Smart switch later and need Alexa to find it).

Troubleshooting Quick Tips

- **Alexa cannot find my devices:** Ensure that your devices are currently online in the Jasmine Smart app. If they are offline there, Alexa will not be able to find them.
- **Voice commands aren't working:** Check that you are saying the exact name of the device as it appears in the Jasmine Smart app. If a device is named "Desk Lamp," saying "Turn on the table light" will not work.
- **Connection issues:** If devices become unresponsive, try disabling the Jasmine Smart skill in the Alexa app and re-enabling it by repeating Steps 2 and 3 above to refresh the connection.
